

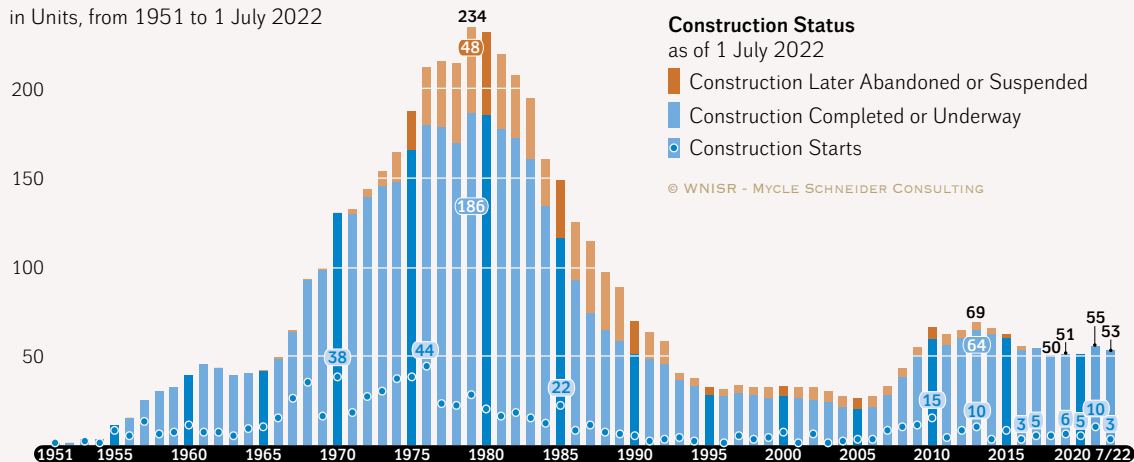

Figure 8 · Nuclear Reactors “Under Construction” in the World (as of 1 July 2022)

Reactors Under Construction in the World

in Units, from 1951 to 1 July 2022

Sources: WNISR, with IAEA-PRIS, 2022

Notes:

This figure includes construction of two CAP1400 reactors at Rongcheng/Shidaowan, although their construction has not been officially announced (see [China Focus](#)). At Shidao Bay, the HTR plant under construction since 2012 has two reactor modules on the site and is therefore counted as two units as of WNISR2020. Grid connection of the first unit of the twin reactors officially took place on 20 December 2021. There is no indication of grid connection of the second module (see [China Focus](#) for details).
