Figure 28 - Reactor Outages in France in 2021 (in number of units and GWe)

Unavailability of French Nuclear Reactors in 2021
Reactors Offline the Same Day (Zero Output)

In Units and Capacity

2021
On 338 days—92% of the year—10 reactors or more did not provide any power at least part of the day, of which 58 days—16% of the year—20 or more reactors. The maximum number of reactors off-line simultaneously was 22 (18.1 GW) and the minimum 7 (5.5 GW). Twenty reactors or more were off-line simultaneously during the equivalent of 32.5 days.

Note: For each day in the year, this graph shows the total number of reactors offline, not necessarily simultaneously as all unavailabilities do not overlap, but on the same day.
