

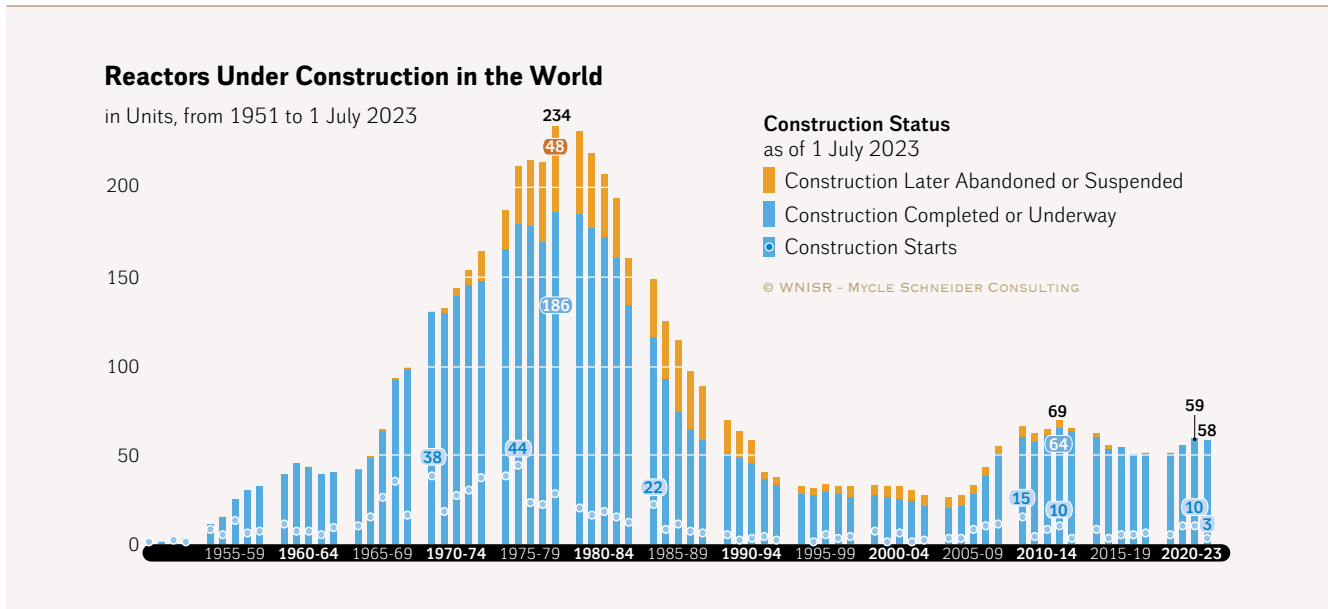

Figure 10 • Nuclear Reactors “Under Construction” in the World

Sources: WNISR, with IAEA-PRIS, 2023

Notes: This figure includes construction of two CAP1400 reactors at Rongcheng/Shidaowan, although their construction has not been officially announced (see [China Focus](#)). At Shidao Bay, the HTR plant, where construction started in 2012, has two reactor modules on the site and is therefore counted as two units as of WNISR2020. Grid connection of the first unit of the twin reactors officially took place on 20 December 2021. No date was provided for startup of the second reactor, which is considered as operating in WNISR2023 as of end-2022 (see [China Focus](#) for details).
